

Milestone 1: Planning & Requirements

Gavin Lanno | February 2nd | [GitHub Link](#)

SDLC Phase: Discovery & Requirements

Buckeye Sublease

Buckeye Sublease is a two-sided digital marketplace that connects students and landlords seeking to list leases or subleases with individuals searching for short-term or flexible housing. The platform allows users to create detailed property listings that include pricing, availability, location, housing type, and photos. Users also create profiles to evaluate compatibility and credibility, enabling both housing search and roommate discovery within a single system. The platform supports apartments, duplexes, quadplexes, and houses, and facilitates efficient matching, listing management, and communication between parties.

Document Layout

I decided to put all the prompts at the end of the assignment since I typically write very large prompts to ensure the best possible results.

Personas

Journey Maps

Buckeye Sublease – Buyer Journey Map

Persona Focus: **Priya Shah** (Short-Term Housing Seeker)

PERSONA: Short-Term Need Identified	Trigger: Housing Need Identified	Discover Buckeye Sublease	Create Account & Profile	Search & Evaluate Listings	Engage & Clarify with Sublessor	Post-Move Follow-Up
Actions	- Receives internship offer - Realizes short-term housing is needed - Sets rough timeline and budget	- Googles “OSU sublease” - Asks friends / online groups - Visits Buckeye Sublease site	- Creates username/ password - Builds profile (bio, photo, preferences) - Reviews platform legitimacy cues	- Applies filters (price, dates, roommates) - Completes preference survey - Views listings and profiles	- Messages sublessor - Asks questions (price, dates, roommates) - Negotiates details if needed	- Completes feedback survey - Receives confirmation emails - Shares platform with peers
Thoughts	“I need housing fast and don't know the	“Is this legit and actually useful?”	“What do I need to share to be trusted?”	“Which option feels safest and most reliable?”	“Do I trust this person and the agreement?”	“That wasn't as stressful as I expected.”
Emotions	- Anxious - Concerned	- Curious - Cautiously Optimistic	- Slightly - Hesitant - Neutral	- Overwhelmed - Hopeful	- Cautious - Relieved	- Satisfied - Calm
Pain Points	- Short timeline - Uncertainty about housing availability	- Curious - Cautiously Optimistic	- Slightly Hesitant - Neutral	- Too many similar listings - Hard to judge roommates remotely	- Slow responses - Unclear expectations	- Legal complexity - Fear of last minute issues
Opportunities	- Clear messaging for interns - Timeline based guidance	- Strong trust branding - Student specific positioning	- Strong trust branding - Trust indicators (verification)	- Guided profile creation - Trust indicators (verification)	- Smart filtering - Profile transparency	- Simple feedback loop - Referral and share tools
Actions	- Clear messaging for interns - Timeline based guidance	- Strong trust branding - Student specific positioning	- Guided profile creation - Trust indicators (verification)	- Smart filtering - Match scoring - Profile transparency	- In-platform messaging - Structured negotiation flow	- Simple feedback loop - Referral and share tools
Actions	- Clear messaging for interns - Timeline based guidance	- Strong trust branding - Student specific positioning	- Strong trust branding - Trust indicators (verification)	- Guided profile creation - Trust indicators (verification)	- Standardized digital contracts - Clear confirmation steps	- Simple feedback loop - Referral and share tools

Feature List

User Features

1. Users can make an account
2. Users can manage a profile (photo, bio, hobbies, etc)
3. Users can be verified as students via school email
4. Users can add statuses indicators (ex. “looking for 2 roommates” or “sublease”)
5. Users can enable new listing notifications matched to preferences
6. Users can direct-message other users
7. Users can report fraudulent accounts
8. Users can report website bugs or give feedback
9. Users can access FAQs or a Chatbot for assistance
10. Users can navigate a map with pins of available subleases
11. Users can complete secure and guided transactions (contract, boosting, or partners services)

Buyer Features

12. Buyers can search for available subleases or leases
13. Buyers can search for potential roommates
14. Buyers can take a preference survey to speed up matching
15. Buyers can compare multiple listing

Seller Features

16. Sellers can create a listing
17. Sellers can manage multiple listings (pictures, status, roommates, etc.)
18. Sellers can boost their listings for increased visibility

User Stories

As a temporary relocater (Ethan), I want to create a sublease listing so that I don't have to pay double rent.

As a Short-Term Housing Seeker (Priya), I want to search for a short term lease so that I'm not tied down when I leave.

As a Trust-focused Decision Maker (Olivia), I want search for verified profiles to know who I'm living with before I live with them so that I don't put myself in a harmful situation.

As a Concerned Financial stakeholder (Mark), I want to find affordable housing fast for my son so that I don't have to stress about him not having housing or out of budget prices next year.

As an independent landlord (Linda), I want to advertise my leases so that I don't have vacant properties.

As an independent landlord (Linda), I want to boost my listings so that I can compete against the big apartment companies that have moved to town.

As a socially motivated Co-Renter (Jordan), I want to match with the similar people who need housing so that I don't just coexist with my housemates but do life together.

Persona Prompts

1. Brainstorm list of persona types (Chat GPT)
2. Put all personas into a table (Chat GPT)
3. Generate image using the table as a reference (Gemini)

-
1. Okay, I know its been a minute, I decided that it would be best for me to restart now and go back to remaking Cribora for my class project as I wont spend so much time making graphs look pretty but I can spend more time utilizing chat bots and coding.

Lets refer to Cribora as Buckeye Sublease. The business is a place were students or landlords can

list a lease or sublease (target is subleases but we can make marketing revenue on lease listing). So a sublesser would fill out a survey to make a listing. (the listing would have pictures, dates, pricing, location, # of roommates, etc.) Additionally they will have to make a profile, this is important because from our survey's we gathered that women really want to know who they're buying from but also their potential roommates. The profile network also serves as a roommate finder, so someone could find a lease and roommates all in one place. The leases consist of a few types of housing, apartments, duxplexes, quadplexes, and a regular house. With that said, I need to remake the personas to match the real estate ecommerce business model.

So I need you to act as a scrum master doing a fuzzy front end analysis to determine who are the personas of the system

So far I've identified a few: Someone needing a sublesser because they have an internship in another city and don't want to pay x2 rent. Out of state student interning in cbus, A parent who is worried their child won't find a place to live, and a landlord who is struggling to compete with bigger apartment complexes. A student who lived in a single both freshman and sophomore year and wants to find a roommate and a house with them. Let me know if you have any other ideas.

(My professor said we shouldn't base personas on age groups, however I think what I have is good so far. Some of my examples could be wrong, so please give concise feedback on how I could improve and what is good).

-
2. 1. Temporary Relocator 2. Short-term Housing Seeker 3. Trust-Focused Decision Maker 4. Concerned financial stakeholder (Parents) (Specifically worried their kid isnt finding housing on

their own. 5. Independent LandLord. 6. Socially-Motivated Co-Renter

Can you create a character for each of the personas, assign a reasonable age, goals, frustrations (with finding housing), a quote stating their need, technology comfort level, martial status, assign a city location (across the USA), comfortability with technology, and their motivations

Can you please put all of it in a table including all of the personas, their constraints, traits, jobs, and what success looks like for them

-
3. I need you to be a scum master who is also an expertise in digital design. Can you make all of those into persona "cards" can you make each persona a different image (so 6 images total) Can you also make sure you include all fields of the table in it with their headers. Please make the image in landscape to ensure you can fit everything onto one image. Please make a format or structure that you will use for all of them. Each card needs to have a different color. Each card must include all fields of the tables and their headers.

- a. Can you generate realistic pictures for all pictures and can you make it more readable, its hard to read and some of the letters are close together
- b. Can you remake the images with all the previous instructions. please include table headers
- c. That is great, I love it!
What I like
The images (They are all great!)
The content!

What could be improved

You could make the images more of a profile picture and add a color banner, then you could have more room for the content and then you could make the design less boxy. Can you do this for all of the persona cards please. Can you also put the content in bullets for Goals, Core traits, Frustrations, motivation, tech comfortability to improve readability and remove "(housing)" from frustrations and "(Need Statement)" from Quote. Remove any Semicolons when printing. Please bold headers and make them 2 font sizes above the body text

Can you please ensure that they all have the same template/layout

Please use the all prompts to make the best image

Rename, "what success looks like" to "Success to {Insert first name}"

Separate the content below the banners into 3 columns

Column 1 (Character snapshot, Core Traits, Quote)

Column 2 (Goals, Key Constraints, Primary Jobs, Tech comfort)

Column 3(Motivations, Frustrations, Success)

Journey Map Prompts

1. Brain storm Stages (Chat GPT)
2. Design table of data (Chat GPT)
3. Create Image (Gemini)

-
1. Alright now that the Persona cards are finished we can move onto the next step of this assignment, The Journey Map. The journey map for buckeye sublease will consist of a few stages, I need you to be my scrum master and software developer professor when analyzing my work and giving feedback. Please be concise and filter feedback to be easily interpreted. Since my marketplace has 2 ideal customers (seller and buyer) maybe I should make 2 journey maps. My ideal seller would be Ethan Collins and the ideal buyer would be Priya Shah. I would like these journey maps to be mutually exclusive. But please come up with content for both. However, I would like to focus specifically on Priya for this for now.

Here are the stages for the

1. Plans change (internship, end of school year, moving back home, etc.)
2. Make account with Buckeye Sublease (username, password, bio, etc.)
3. Search for housing (Filter search, look at pages, compare sublets, look at sublet profiles)
 - a. Fill out preference survey

4. Contact sublease (notify, negotiate,
5. Sign sublease (sign contract)
6. Post (Survey on process, follow up emails, spread word)

What are your thoughts on that, can you please give me concise neutral feedback

2. Here is an example of the type of journey map I would like you to make.

I like the cleaned up names you made, now I want to get everything prepared to make the journey map. I would like you to make a table with each Steep as the Headers and the process as the first row

The process should include all the actions, please bullet them within the cell.

Listed below are all of the rows I would like you to have on the axis

Actions: What does the user do?

- Thoughts: What are they thinking?

- Emotions: How do they feel? (use emotion curve)

- Pain Points: What frustrates them?

- Opportunities: How could Buckeye Marketplace help?

3. Okay now I need you to make a journey map using that table, I need you to be a scrum master who has a strong back ground in making presentable journey maps. Make each column a different color, have a consistent font for each type of text (Titles, headers, body, etc.), where you see bullets in the cell please use bullets, please do NOT put an image of Priya but reference Priya from the persona as our target for this journey map. Can you please make it visually stimulating. I need you make it basically how the table is. Have the first column of the journey map be the row headers with the titles, then have the first row be the column header of the table
 - a. Can you redo that but remove the emojis from the emotions row, they do not match the emotion being listed

Feature List Prompts

1. Brainstorm Stage (Chat GPT)
2. Refine extended list (Chat GPT)
3. Further Refinement (Chat GPT)

-
1. Next up on our list in the fuzzy cone is to come up with feature ideas! I want to Brainstorm a list of requirements and features

Features (what the system should do and why?)

Requirements (How the system should do it?)

Here is my current list {

Buyers can search for leases or roommates

Buyers can filter searches for tailored results

Users can make an account

Sellers can list their sublet

Buyers can message sellers on the app

Buyers should get notified when relevant new listings are added}

This is an example, could you give me constructive feedback on this please

2. Okay here is a list of more that I've brainstormed that are pretty good

My professors example was "User can search for products", that is fairly broad but that is the point, its not supposed to be super specific but cover a

feature a user might expect. The user will expect to have to search for items

Here is my updated list of features

1. Users can make an account
 2. Users can manage a profile (pfp, name, bio, hobbies, etc)
 3. Users can be verified as students (School email verification)
 4. Users can add statuses to their profile, such as “looking for 2 roommates” or “sublease”
 5. Users can enable new listing notifications matched to preferences
 6. Users can report a bug or issue
 7. Users can direct-message other users
 8. Users navigate FAQs or a Chatbot for assistance
 9. Buyers can search for only available subleases or leases
 10. Buyers can search for potential roommates
 11. Sellers can make a listing
 12. Sellers can manage multiple listings (pictures, status, roommates, etc.)
 13. Sellers can boost their listings
-

3. Here is my updated list

User Features

1. Users can make an account

2. Users can manage a profile (photo, bio, hobbies, etc)
 3. Users can be verified as students via school email
 4. Users can add statuses indicators (ex. “looking for 2 roommates” or “sublease”)
 5. Users can enable new listing notifications matched to preferences
 6. Users can direct-message other users
 7. Users can report fraudulent accounts
 8. Users can report website bugs or give feedback
 9. Users can access FAQs or a Chatbot for assistance
 10. Users can navigate a map with pins of available subleases
 11. Users can have smooth and trustworthy transactions (contract, boosting, or partners)
- #### Buyer Features
12. Buyers can search for available subleases or leases
 13. Buyers can search for potential roommates
 14. Buyers can take a preference survey to speed
- #### Seller Features
16. Sellers can create a listing
 17. Sellers can manage multiple listings (pictures, status, roommates, etc.)
 18. Sellers can boost their listings for increased visibility
-

User Story Prompts

1. List Refinement (Chat GPT)

1. Okay moving on to the user stories. I would like you to give me feedback with the given instructions of my users stories.

Here are my instructions:

Format: "As a [persona], I want to [action] so that [benefit]"

- For each story, include:
- Clear acceptance criteria (how will you know it's done?)
- Priority level (Must/Should/Could)
- Connection to which persona(s) it serves
- Stories should cover core functionality across buying, selling, and account management

Here are my user stories

As a temporary relocater (Ethan), I want to sublease my apartment so that I don't have to pay double rent.

As a Short-Term Housing Seeker (Priya), I want to find a short term lease so that I'm not tied down when I leave.

As a Trust-focused Decision Maker (Olivia), I want to know who I'm living with before I live with them so that I don't put myself in a harmful situation.

As a Concerned Financial stakeholder (Mark), I want to help my son find affordable housing fast so that I don't have to stress about him not having housing or out of budget prices next year.

As an independent landlord (Linda), I want to advertise my leases so that I don't have vacant properties.

As an independent landlord (Linda), I want to boost my listings so that I can compete against the big apartment companies that have moved to town.

As a socially motivated Co-Renter (Jordan), I want to connect with the similar people who need housing so that I don't just coexist with my housemates but do life together.
